FASTSIGNS
More than fast. More than signs.®

Need to seamlessly integrate branding and wayfinding?

Authorized **modulex** reseller

FASTSIGNS® provides comprehensive visual communications solutions for wayfinding and brand identity. As an authorized Modulex® reseller, we solve your challenges and enhance the look of your building or environment with modular signage systems.

Using simple, elegant and flexible components from Modulex, we brand your directional and wayfinding signs, building directories and wall and door signs. Great for interior and exterior use, FASTSIGNS can help your corporate, educational, healthcare or other campus facility look better and be easier to navigate.

Founded by the Lego Group, Modulex features distinctive curved designs and elegant lines. Our visual communications consultants can recommend flexible, durable Modulex signage that works well in various environments, and meets current ISO 9001 standards.

You can rely on FASTSIGNS to help you expand or replace modular components, too.

Ready to increase your brand identity and visibility with great wayfinding signs and graphics? FASTSIGNS is more than ready to help.

Identification sign combined with directional information

Simple and elegant

Macer Exterior is a suitable sign system for both orientation and the presentation of visual identity. Its elegance and simplicity make it ideal for both external and internal architectural signage, particularly on sites in the educational or cultural sectors. Macer Exterior consists of only three elements: a base made from galvanized steel to maximize durability, a decorative cover for the base and a panel for texting. The system also allows outstanding freedom in the design of text and graphics.

Macer Exterior not only allows you to create signs of almost any shape and graphic content, it is developed to withstand even the most extreme weather conditions, and by combining Macer Exterior with Macer Interior you can achieve consistency between your exterior and interior sign solutions.

Elegant flexibility for your exterior areas

Messenger Exterior combines form, function and flexibility and its modular design allows you to add to your system easily. Messenger Exterior can be combined with Messenger Interior to create a visually consistent system. Its sharp and elegant appearance communicates your visual identity effectively.

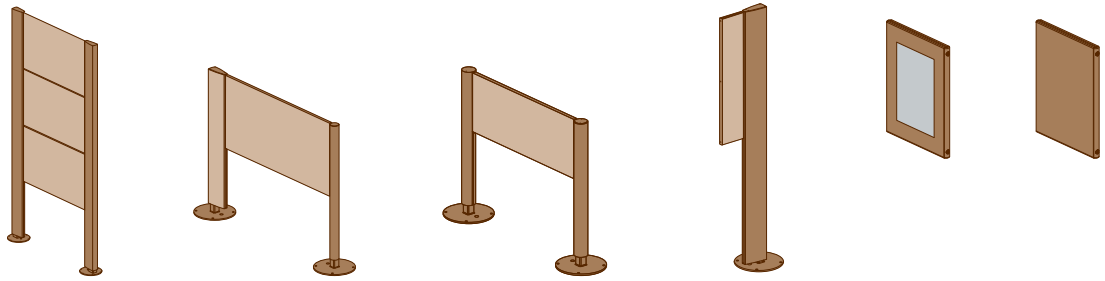

A Modulex classic

Pacific Exterior meets demand for good design and durability in extreme weather conditions. Every sign has the clean lines of a piece of modern furniture, adding a unique touch of style to the area around your building.

Pacific Exterior brings form and function together by combining a large texting field with several mounting options using a single base or a monolith. It is both a modular and dynamic system.

Simple and original

Compass is an outstanding exterior sign system with countless applications. It broke new ground in the world of architectural post and panel systems when it was introduced more than 30 years ago and meets the highest standards of quality and functionality.

Compass works well in exterior applications, effectively identifying sites and outdoor areas and stylishly communicating a company's visual identity. By combining cylinder or trapezium shaped posts with a selection of flat signs you can create your own bespoke solution.

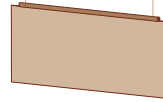

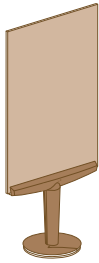

Compass is a highly flexible system offering almost limitless color options. The availability of digital print solutions, print-on-panel and foil allow you to support your brand identity more creatively than ever before.

Unleash your creativity with the slimmest modular system on the market

Macer Interior opens up new creative solutions with an innovative system which combines slim and elegant design with great functionality and full modularity.

The design of Macer Interior consists of three simple elements: a unique support of extruded aluminium, a panel made of glass, acrylic, aluminium or Ethronite and a discreet upper support which is used on large panels and with Paperflex solutions as a locking device.

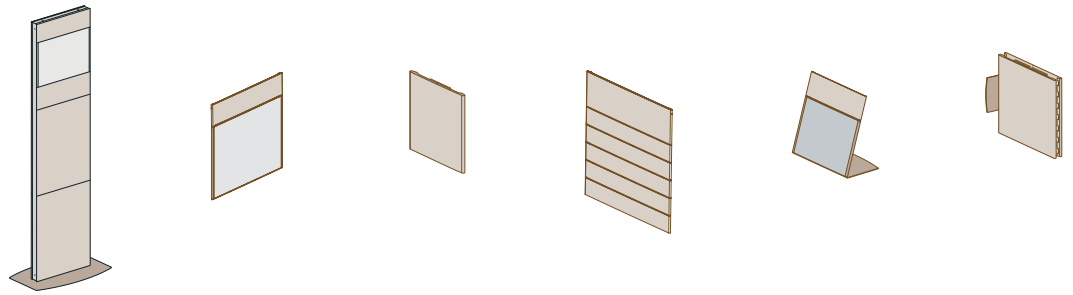

Combined with Macer Exterior this system offers a consistent solution from the outside of the building to the sign on the door at your destination. The print-on-panel technology (digital printing directly on the panel) makes it possible to text or decorate the sign as you like.

Complete modularity

Like all other Modulex sign systems, Messenger Interior is modular and designed for easy replacement and updating.

The Messenger system provides a wide range of different formats which can deal with any situation: wall signs, suspended signs, projecting signs and signs on posts.

The many similarities between the Pacific and Messenger systems make it possible to combine these two systems in a consistent solution and, in areas where regular updating is required, the Paperflex system enables you to display your own printed documents protected by an acrylic plate.

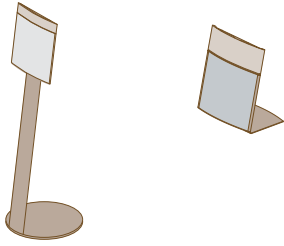

Add extra character to your signage
with Pacific Interior Accent

Wall mounted Pacific Interior

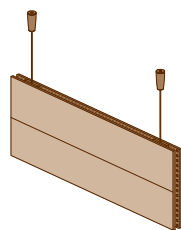

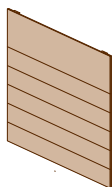

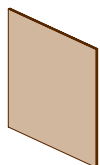

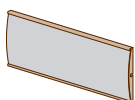

Elegant and modern style

The pure lines and compact appearance of the Pacific system allow it to blend into any environment and its comprehensive range provides a simple and attractive solution which will guide you throughout your journey.

The panels are modular and fully interchangeable, which makes it easy to update the system.

A wide range of sizes and types can cope with any situation: overview signs, directional signs or door signs; wall signs, suspended signs, projecting signs or signs on posts.

Infinity Glass mounted on grid

Infinity wall signs on grid

Infinity Classic grid

Infinity Classic rails

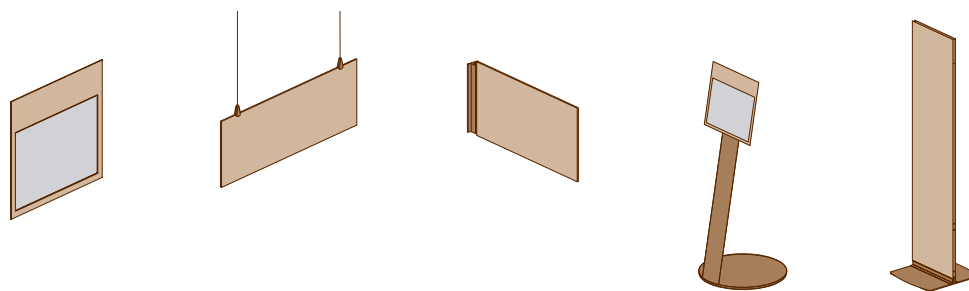

The most versatile architectural sign system

Infinity Classic is the perfect solution for complex projects. Its modular and highly adaptable system is based on a perforated back plate to which injection moulded plastic clips may be fixed - a classic Modulex solution. You can therefore put together panels very freely and extend and modify the system later if necessary.

Infinity can also be used without a back plate, but with an intermediate piece and fixing clips that are more cost-efficient (see Infinity Basic). If you want a more distinctive solution you can design your own system or even introduce alternative materials. Infinity offers unequalled flexibility of design and all the advantages of a conventional modular system.

The print-on-panel technology opens up even more possibilities. This direct digital print system can print in all colors including white, offering the designer full graphic freedom and a real quality finish.

Infinity Ellipsis

Infinity Basic

Infinity Basic Paperflex

Infinity Ellipsis

Infinity Basic – a clever and cost-efficient system

Infinity Basic makes it possible to carry out projects with interesting graphic content without sacrificing the economic advantages of the industrialized system.

Infinity also allows a creative approach to form - without the cost penalties usually associated with special solutions. So you get the cost benefits of mass production and the reassurance that the system can be supplemented in the future without sacrificing creative freedom. Taking advantage of this, Modulex designers have developed new shapes like Infinity Blazon and Infinity Ellipsis.

Infinity Blazon is as complete a system as Infinity Basic. It is based on a heraldic form - hence the name Blazon which refers not only to a shield for the protection of the warrior but also the token and symbol of his family.

Infinity Ellipsis is also a complete system offering a wide range of wall signs, suspended signs, projecting signs and door signs in both Paperflex and permanent versions. All the sizes can be combined to achieve innovative and interesting solutions and the fixing method also allows for the mutual rotation of panels fixed back-to-back.

Intelligent solutions in contemporary design

Today digital technology dominates most of the world of communication and Modulex is continually developing solutions which employ the latest techniques. Wall-mounted screens or free-standing monoliths provide directories, identification and information about events. Manage meeting rooms with Facility View and identify offices with eFlex. Touch function, Wi-Fi connectivity and other innovative technologies integrate with the existing Modulex ranges, thus achieving new levels of flexibility and interaction.

The eFlex sign is based on a bi-stable technology that only uses power when being updated. Driven by a battery and updated by a wireless network, the sign requires no cabling, so is ideal for glass mounting. eFlex can be used as a door sign, a small meeting room sign or a free-standing desk sign.

Improve access for blind and visually impaired people

We possess both the expertise and the necessary technologies to create an effective tactile sign solution.

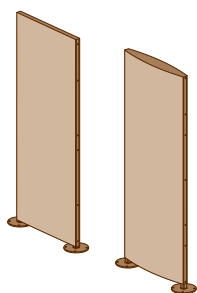

We have the necessary translation software to produce correct Braille in any language and by using photo polymer plates, which provide the best marking, our texting team is able to handle all types of raised letter or Braille.

Our tactile and Braille signage is approved by a number of leading organizations for blind and visually impaired people. You are assured of a result that is in full accordance with the expectations of blind and visually impaired users and of the regulatory authorities.

Raised pictograms can also be used as decoration

Basic Exterior

Letters with Corona light

From complex to simple

With Modulex, your signage project is not necessarily limited to traditional way-finding or identification signs.

Signage is often an important part of a company's global identity covering a wide range of materials such as name badges, self-adhesive decals and other forms of graphic communication. We are used to dealing with these things.

The Modulex product development and graphics teams are always here to support you. You are welcome to utilize our skills and to have your own series of letters or symbols produced in raised letters, cut in various materials like aluminium, Ethronite, Dibond, or acrylics, with or without illumination.

In contrast to the bespoke solution, the Basic Exterior series offers a standardised simplicity which combines quality and economy in ways that allow you to buy signs of a very high quality at really competitive prices. Basic Exterior is available in both curved and flat versions. The range is simple but very suitable for ID signs.
